Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The indicated allowability of claim 7 is withdrawn in view of the newly discovered reference(s) to Farrell. Rejections based on the newly cited reference(s) follow.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 7 is rejected under 35 U.S.C. §102 (b) as being anticipated by Farrell.

Firstly, the recitation “of an air pressure steel jar of a paint ball gun” is considered a statement of intended use bearing no patentable weight.

The patent to Farrell, in figure 2, discloses “ valve configuration... comprising a valve (body 6) and a valve needle (7) assembled by rotary joint (at threaded stem 14); a through hole (for outlet 9 is) disposed on the valve (body 6 and) is situated in a lateral aspect of the valve needle (7); wherein the through hole having an aperture size corresponding to displacement of the valve needle thereby adjusting the pressure thereof” is met by the adjustment of the position of the valve needle 7 relative to the outlet port for outlet 9. This adjustment defines a flow control aperture dependent of the size of the aperture between a fully closed position, when the valve needle 7 completely covers the lateral port, and a fully open position, when the valve needle is not within the cross sectional area of the lateral port. When the valve needle is between these two positions, the aperture defined therein is variable and will adjust “the pressure” supplied from the inlet 4 to the outlet 9 as claimed.

Claims 1-6 are allowed.
